1.

What is the time complexity to insert an element into the queue of 'n' elements.

A. O(1)
B. O(n)
C. O(log n)
D. O(n^2)

Answer : A

2.

What is the queue full condition for the circular queue of n elements, if front and rear are set to -1.

A. Front == Rear
B. Front == (Rear + 1) % n
C. Front > Rear
D. Front = Rear = -1

Answer : B

3.

Which of the following are not the queue applications ?

A. Customer Service Calls
B. Disk scheduling
C. Traffic Management systems
D. Undo / redo Operations

Answer : D

4.

Which of the following is NOT true about circular queues?

A. It Follows First In First Out Mechanism.

B. Insertion Is Done From Rear End and deletion is done from Front end.

C. Inertion is done from Front End and deletion is done from Rear End.

D. The Memory Space of the queue can be Re-utilised.

Answer : C

5.

Implementation of Linear Queue can be done using :

A. Only Static Implementation.

B. Only Dynamic Implementation.

C. Both Static and Dynamic Implementation.

D. Not Sure.

Answer : C
