1.

Choose the correct statement:

A. static variable gets memory every time the function is called
B. register variable can be accessed using pointers
C. extern variables are accessible across multiple files
D. auto variables have global scope

Answer: C

2.

Find the output of the following code:

```
#include <stdio.h>
void modify(int x)
{
	x += 10;
	printf("%d ", x);
	return;
}
int main(void)
{
	int x = 5;
	modify(x++);
	printf("%d", x);
	return 0;
}
```

A. 15 5
B. 15 15
C. 15 6
D. Compile error

Answer: C

3.

Find the output of the following code:

```
#include <stdio.h>
void Hello();
int main(void)
{
	Helo();
	return 0;
}
void Hello()
{
	printf("Hello");
	return;
}
```

A. Compile error
B. Prints "Hello"
C. Linker error
D. Garbage output
E. Run time error

Answer: C

4.

Which of the following is true about static variables in C?

A. They are destroyed when function completes its execution
B. They are reinitialized each time
C. They will retain values across multiple calls
D. They cannot be used inside functions

Answer: C

5.

Find the output of the following code:

```
#include <stdio.h>
void test()
{
        static int a = 0;
        a++;
        printf("%d ", a);
        return;
}
int main()
{
        for (int i = 0; i < 3; i++)
        {
                test();
        }
        return 0;
}
```

A. 1 1 1

B. 1 2 3

C. 3 3 3

D. 0 1 2

E. garbage values

Answer: B

6.

Find the output of the following code:

```
#include <stdio.h>
int abc(int i);
int main(void)
{
	int result=abc(10);
	printf("%d",--result);
	return 0;
}
int abc(int i)
{
	return i++, i-5;
}
```

A. 10

B. 9

C. 11

D. None of these

Answer: D
