

1.

In which of the following interrupt types does the CPU check periodically whether an interrupt has occurred?

- A. Hardware interrupt**
- B. Software interrupt**
- C. Vectored interrupt**
- D. Polling**

Answer: D

2.

What is ISR?

- A. A routine that saves memory**
- B. A program that handles interrupts**
- C. A disk driver**
- D. A cache memory controller**

Answer: B

3.

Which is a memory management technique that divides memory into equal fixed-size blocks?

- A. Segmentation**
- B. Paging**
- C. Fragmentation**
- D. Swapping**

Answer: B

4.

The memory unit that communicates directly with the CPU is:

- A. Secondary memory
- B. Main memory (RAM)
- C. Cache memory
- D. Virtual memory

Answer: C

5.

Virtual memory is:

- A. Part of main memory
- B. Part of cache
- C. Space on the hard disk used as RAM
- D. A type of ROM

Answer: C

6.

External fragmentation is a problem in:

- A. Paging
- B. Fixed partitioning
- C. Segmentation
- D. Segmentation and contiguous memory

Answer: D

7.

What is the main function of the Memory Management Unit (MMU)?

- A. Input / Output control**
- B. Address translation**
- C. Disk scheduling**
- D. Power management**

Answer: B
