

1.

Which state means the process is waiting to be assigned to a CPU?

- A. New**
- B. Running**
- C. Waiting**
- D. Ready**

Answer: D

2.

What does the OS do when a running process needs to wait for I/O?

- A. Moves it to the ready state**
- B. Deletes it**
- C. Moves it to the waiting state**
- D. Terminates it**

Answer: C

3.

Which scheduling algorithm gives the minimum waiting time for a set of processes?

- A. Shortest Job first (SJF)**
- B. Round Robin**
- C. First-Come, First-Served (FCFS)**
- D. Priority Scheduling**

Answer: A

4.

Which of these is a drawback of non-preemptive scheduling?

- A. CPU switches too often**
- B. Context switching overhead**
- C. One long process can block others**
- D. It can not be used for batch system**

Answer: C

5.

What does aging prevent starvation?

- A. By decreasing burst time**
- B. By giving more memory**
- C. By gradually increasing the priority of waiting processes**
- D. By terminating low-priority processes**

Answer: C

6.

Which scheduling algorithm selects the job with the least time remaining to execute?

- A. FCFS**
- B. SRTF**
- C. SJF**
- D. Round Robin**

Answer: B

7.

Which one is not considered a CPU scheduling criterion?

- A. Context Switching**
- B. Waiting Time**
- C. Throughput**
- D. Turnaround Time**

Answer: A
