

1.

A cooperative process is:

- A. Runs on its own without any communication**
- B. Shares data and resources with other processes**
- C. Is terminated after execution**
- D. Is only used in batch system**

Answer: B

2.

The main problem with multiple processes in the critical section is:

- A. High memory usage**
- B. Slow execution**
- C. Data inconsistency or corruption**
- D. Process starvation**

Answer: C

3.

Which of the following is not a necessary condition of deadlock?

- A. Mutual exclusion**
- B. Hold and wait**
- C. Preemption**
- D. Circular wait**

Answer: C

4.

Which semaphore allows only one process in the critical section at a time?

- A. Counting semaphore**
- B. Binary semaphore**
- C. Spinlock**
- D. None of the above**

Answer: B

5.

In multiprocessing system, when one program is waiting for I/O, then CPU:

- A. Wait with the program**
- B. Remains idle**
- C. Switches to another program**
- D. Shuts down**

Answer: C

6.

Linux or

Which System call is used to create a new process in Unix ?

- A. Fork()**
- B. Create()**
- C. Process_create()**
- D. Start**

Answer: A

7.

A counting semaphore initializes to 3. Three processes call wait(), and one process calls signal(). What is the final value of the semaphore?

- A. 0**
- B. 1**
- C. 2**
- D. 3**

Answer: B
