

1.

Which switching technique divides data into packets before transmitting?

- A. Circuit switching**
- B. Message switching**
- C. Packet switching**
- D. Manual switching**

Answer: C

2.

Which network type is best suited for a city-wide connection?

- A. LAN**
- B. MAN**
- C. PAN**
- D. GAN**

Answer: B

3.

Which is the most efficient switching technique for the Internet?

- A. Packet switching**
- B. Circuit switching**
- C. Manual switching**
- D. Token switching**

Answer: A

4.

Which multiplexing method is widely used in optical fiber communication?

- A. TDM**
- B. FDM**
- C. WDM**
- D. SDM**

Answer: C

5.

What is the purpose of multiplexing?

- A. To store more data**
- B. To increase transmission delay**
- C. To send multiple signals over a single channel**
- D. To reduce cable length**

Answer: C

6.

In which switching technique is the entire message sent to the next node before moving on?

- A. Circuit switching**
- B. Packet switching**
- C. Message switching**
- D. Path switching**

Answer C

7.

The Internet is an example of:

- A. LAN**
- B. PAN**
- C. MAN**
- D. WAN**

Answer: D
