

[0]	[1]	[2]	[3]	[4]	[5]
11	22	33	44	55	66

It 1 →

$11 > 22$
 $22 > 33$
 $33 > 44$
 $44 > 55$
 $55 > 66$

Conditions false.
no swapping.

If there is no swapping in the iteration, we can stop it from going further.

Hence there will be 1 iteration and $n-1$ comparisons

So in best case time complexity is $O(n)$.

-1 is discarded

It 1.
 flag = 0.

11 22 33 44 ~~66~~ ~~55~~
 55 66.

$11 > 22$ no
 $22 > 33$ no
 $33 > 44$ no
 $44 > 66$ no
 $66 > 55$ yes → swap → flag = 1

2 its
 $5 + 4$
 9.

It 2.
 flag = 0.

$11 > 22$ no
 $22 > 33$ no
 $33 > 44$ no
 $44 > 55$ no
 ~~$55 > 66$~~
