

1.

Consider an array of 10 elements, what will be the time complexity, if the element is found on the 7th position using linear search?

- A. $O(n)$
- B. $O(1)$
- C. $O(n/2)$
- D. $O(\log n)$

Answer: A

2.

If the Searching is performed on an array which is sorted in the descending order, which element will give the best-case time complexity?

- A. Element at first position
- B. Element at last position
- C. Element at mid position
- D. None of the above

Answer: C

3.

Consider an array 11,22,33,44,55,66. After how many comparisons will we find the element 22 using binary search?

- A. 1
- B. 2
- C. 3
- D. 4

Answer: C

4.

What is the Space complexity Of Linear and Binary Search respectively?

- A. $O(1)$ $O(n)$
- B. $O(n)$ $O(1)$
- C. $O(n)$ $O(n)$
- D. $O(1)$ $O(1)$

Answer: D

5.

What is Total Space Complexity?

- A. Total Input Space
- B. Total Auxiliary Space
- C. Input + Auxiliary Space
- D. Space Taken by the code in the text section.

Answer: C
